索引

索引中的页码为英文原书的页码、与书中边栏的页码一致。

符号

- * (wildcards) (*通配符), 31
- *=, 149
- [], 71-73, 另见matches(regular expressions)
- ^, 80
- , 73
- (), 56-59
- % (wildcards) (%通配符), 62-63
- ;, 28
- _ (wildcards) (_通配符), 64-65

A

- access controls (访问控制)
 - mistakes, preventing (错误, 防止), 264
 - overview (概述), 263-264
 - user accounts (用户账号), 267-270
- Administrators (MySQL), 18, 264
- advantages of MySQL (MySQL的优点), 13
- AFTER versus BEFORE (AFTER与BEFORE), 245
- Against(), 164-168
- aggregate functions (聚集函数), 另见 individual functions
 - combining (组合), 108
 - joins, utilizing (联结, 利用), 149-151
 - overview (概述), 99-100

aliases (别名)

- alternative uses (替换使用), 85
 - concatenating fields (拼接字段), 84-85
 - naming (命名), 109
 - table names (表名), 143-144
 - ALL arguments (ALL参数), 107
 - ALTER TABLE statements (ALTER TABLE语句), 203-204
 - ANALYZE TABLE, 274
 - anchors (regular expressions) (定位(正则表达式)), 78-79
 - AND operators (AND操作符), 53-57
 - application filtering (应用过滤), 46
 - AS keyword (AS关键字), 85
 - ASC, 42
 - asterisk wildcards (星号通配符), 31
 - AUTO INCREMENT, 198-199
 - auto increment (自动增量), 25
 - autocommit flags (自动提交标志), 255
 - AVG(), 100-101, 107
- ## B
- backing up data (备份数据), 273
 - basic character matching (基本字符匹配), 68-70, 另见matches(regular expressions)
 - BEFORE versus AFTER (BEFORE与AFTER), 245

BETWEEN, 49-50

binary datatypes (二进制数据类型), 304

Boolean mode (布尔方式), 170-175

C

calculated fields (计算字段)

concatenating fields (拼接字段), 82-85

mathematical calculations (数学运算), 86-87

overview (概述), 81-82

subqueries as (子查询作为计算字段), 126-128

Cartesian products (笛卡儿积), 136-138

case sensitivity (区分大小写)

expression matching (表达式匹配), 70

full-text searches (全文本搜索), 165

sort orders (排序顺序), 42

searches (搜索), 63

statements (语句), 29

character classes (regular expressions),

matching (字符类(正则表达式), 匹配), 76

character matching (字符匹配), 68-70, 另见 matches (regular expressions)

characters sets (字符集)

overview (概述), 257-258

working with (使用), 258-261

CHECK TABLE, 274

clauses (子句), 38, 另见 individual clauses

client-based results formatting (基于客户机的结果格式化), 82

client-server software (客户机-服务器软件), 14-15

collation sequences (校对顺序)

overview (概述), 257-258

working with (使用), 258-261

column aliases (列别名), 84-85

columns (列), 另见 fields

commas between names (名字之间的逗

号), 29

definition of (定义), 8

derived (推导出的), 86

fully qualified names (完全限定名), 135

INSERT statements (INSERT语句), 181

padded spaces (填补空格), 84

primary keys (主键), 9-10

retrieving with SELECT (用SELECT检索)

all (所有列), 31

individual (单个列), 27-28

multiple (多个列), 29-30

separating correctly (正确分隔), 8

sorting by multiple (按多个列排序), 39-42

subquery result restrictions (子查询结果约束), 125

combined queries, creating (组合查询, 创建), 156

command-line (mysql) (命令行 (mysql)), 16-17

command-line utilities (命令行实用程序), 221-222

commands (命令), 参见 individual commands

commas between column names (列名之间的逗号), 29

COMMENT keywords (COMMENT关键字), 229

commits (提交), 253-255

committing (提交), 251

complex joins (复杂联结), 210-211

compound queries (复合查询)

creating (创建), 154-156

overview (概述), 153

rows, eliminating/including duplicates (行, 删除/包括复制), 157-158

rules of (规则), 156-157

sorting results (排序结果), 158-159

WHERE clause combinations (WHERE子句组合), 153

concatenating (拼接)

column aliases (列别名), 84-85

definition of (定义), 83

fields (字段), 82-84

mathematical calculations (数学计算),
86-87

COUNT(), 102-103

COUNT() functions (COUNT()函数)

DISTINCT arguments (DISTINCT参数), 108

joins (联结), 149

performing through subqueries (通过子查询执行), 126

CREATE, 25

CREATE TABLE, 另见tables

engines (引擎), 201-202

statements (语句), 193-195

cross joins (交叉联结), 138

currency numbers, storing (货币数, 排序),
303

cursors (游标)

creating (创建), 232-233

FETCH statements (FETCH语句), 234-239

opening/closing (打开/关闭), 233-234

overview (概述), 231

utilizing (利用), 232

customers table (customers表), 287-288

D

database client-server software interactions
(数据库客户机-服务器软件的相互作用), 14

databases (数据库)

backing up (备份), 273

compared to Database Management
Systems (DBMSs) (与DBMS的比较), 6
compared to schema (与模式的比较), 7
definition of (定义), 6

maintenance, performing (维护, 执行),
274-275

selecting with USE (用USE选择), 22-23

datatypes (数据类型)

binary datatypes (二进制数据类型), 304

date and time datatypes (日期和时间数据类型), 303

definition of (定义), 8

numeric datatypes (数值数据类型),
301-303

overview (概述), 299

string datatypes (串数据类型), 300-301

date and time manipulation functions (日期
和时间处理函数), 93-96

DBMSs (Database Management Systems)
(数据库管理系统)

compared to databases (与数据库比较),
6

performance, improving (性能, 改进),
277-279

DECLARE statements (DECLARE语句), 228,
237

DEFAULT, 200

DELAYED keywords (DELAYED关键字), 278

DELETE statements (DELETE语句), 189-191

DELETE triggers (DELETE触发器), 245-246

delimiters (分隔符), 221-222

derived columns (推导出的列), 参见aliases
DESC, 42

DESCRIBE, 25

DISTINCT arguments (DISTINCT参数)

overview (概述), 106-108

retrieving distinct rows (检索不同的行),
31-33

downloading MySQL (下载MySQL), 282

DROP PROCEDURE, 223

DROP TABLE statement (DROP TABLE语句), 205

DROP USER, 267

E

encoding (编码), 257

engines (引擎), 201-202, 249
 error codes (错误代码), 236
 expression matching (表达式匹配), 参见
 matches (regular expressions)

F

FETCH statements (FETCH语句), 234-239
 fields (calculated) (字段 (计算)), 另见
 columns
 concatenating fields (拼接字段), 82-85
 mathematical calculations (数学计算),
 86-87
 overview (概述), 81-82
 FLUSH LOGS statements (FLUSH LOGS语句),
 276
 FLUSH TABLES statements (FLUSH TABLES语
 句), 273
 foreign keys (外键), 202
 formatting (格式化), 82
 FROM, 27
 full-text searches (全文本搜索)
 Boolean mode (布尔方式), 170-175
 case sensitivity (区分大小写), 165
 enabling (启用), 163-164
 engine support (引擎支持), 161
 multiple search terms, ranking (多个搜
 索项, 等级), 168
 overview (概述), 175-176
 performing (执行), 164-168
 query expansion (查询扩展), 168-170
 FULLTEXT clauses (FULLTEXT子句), 163-164,
 171
 fully qualified table names (完全限定的表
 名), 35-36
 functions (函数), 另见 individual functions
 date and time manipulation functions (日
 期和时间处理函数), 93-96
 numeric manipulation functions (数值处
 理函数), 97

overview (概述), 89-90
 text-manipulation functions (文本处理函
 数), 90-92

G

GRANT statements (GRANT语句)
 simplifying multiple statements (简化多
 条语句), 271
 user accounts, creating (用户账号, 创
 建), 266
 user rights (用户权限), 268-270
 GROUP BY
 compared to ORDER BY (与ORDER BY比较),
 116-118
 creating groups with (创建组), 112-113
 filtering groups with (过滤组), 113-116

H

HAVING clauses (HAVING子句), 114-116

I

IF NOT EXISTS, 195
 IF statements (IF语句), 230
 IGNORE, 189
 implicit commits (隐含提交), 253
 IN
 definition of (定义), 59
 utilizing in WHERE clauses (在WHERE子句中
 使用), 57-59
 IN BOOLEAN MODE, 172, 另见 Boolean mode
 inner joins (内部联结), 139
 InnoDB
 description of (描述), 202
 full-text searching support (全文本搜索支
 持), 161
 INSERT SELECT statement (INSERT SELECT语
 句), 183-185
 INSERT statement (INSERT语句), 266
 complete rows, inserting (完整行, 插入),

177-181
multiple rows, inserting (多个行, 插入),
181-183
overview (概述), 177
performance of, improving (性能, 改善),
183
retrieved data, inserting (检索数据, 插
入), 183-185
security privileges (安全权限), 177
INSERT triggers (INSERT触发器), 244-245
installing MySQL (安装MySQL), 282

J

joins (联结)

aggregate functions interaction (聚集函数
相互作用), 149-151
as system drags (使系统缓慢), 140
Cartesian products (笛卡儿积), 136-138
column names, qualifying (列名, 限定),
135
creating (创建), 134-135
cross joins (叉联结), 138
general guidelines (通用指南), 151
inner joins (内部联结), 139
multiple table joins (多表联结), 139-141
natural joins (自然联结), 146-147
outer joins (外部联结), 147-149
overview (概述), 131
purpose of (用途), 133
referential integrity, maintaining (引用完
整性, 维护), 133-134
self joins (自联结), 144-146
views, simplifying with (视图, 简化),
210-211
WHERE clause importance (WHERE子句的重
要性), 135-136

K

keywords (关键字), 22, 另见individual

keywords

L

left outer joins (左外部联结), 148-149
LIKE operators (LIKE操作符), 另见wildcards
compared to REGEXP (与REGEXP比较), 70
limitations of (限制), 162
utilizing REGEXP like (使REGEXP类似于
LIKE), 80
LIMIT
highest/lowest values, finding (最高/最
低值, 查找), 43
retrieving rows (检索行), 33-34
local servers, advantages of (本地服务器,
优点), 281
log files, reviewing (日志文件, 查看),
275-276
logical operators (逻辑操作符), 参见
operators
logins (MySQL) (登录 (MySQL)), 21-22
LOOP statements versus REPEAT statements
(LOOP语句与REPEAT语句), 237
LTRIM() function (LTRIM()函数), 84

M

Match(), 164-168
matches (regular expressions) (匹配 (正则
表达式))
[], utilizing ([], 使用), 71-73
anchors (定位符), 78-79
character classes, matching (字符类, 匹
配), 76
OR matches (OR匹配), 70-71
repetition metacharacters (重复元字符),
76-78
set matches (集合匹配), 73
special characters, matching (特殊字符,
匹配), 74-75
mathematical calculations, performing (数

学计算, 执行), 86-87
 mathematical operators (数学操作符), 87
 MAX(), 103-104, 108
 MEMORY, 202
 MIN(), 104-105, 108
 MyISAM, 161, 202
 MySQL Administrators, 18, 264
 MySQL command-line (MySQL命令行), 16-17
 MySQL Query Browser, 19
 MySQL software (MySQL软件), 282

N

names (fully qualified table names)(名字(完全限定表名)), 35-36
 natural joins (自然联结), 146-147
 nested groups (嵌套组), 113, 另见GROUP BY
 non-numeric data (非数值数据), 104-105
 nonmatches (不匹配), 48-51
 NOT, 59-60
 NULL
 checking for with WHERE clauses (用WHERE子句检查), 50-51
 compared to nonmatches (不匹配比较), 51
 function interactions (函数相互作用), 102-106
 tables (表), 195-197
 versus empty strings (NULL与空串), 197
 wildcard searches (通配符搜索), 64
 numeric datatypes(数值数据类型), 301-303
 numeric manipulation functions(数值处理函数), 97

O

operators (操作符)
 definition of (定义), 53
 full-text Boolean mode (全文本布尔方式), 173

HAVING clause (HAVING子句), 114
 mathematical (数学), 87
 WHERE clauses (WHERE子句), 46-47
 OPTIMIZE TABLE, 275
 OR
 matches (匹配), 70-71
 overview (概述), 54-57
 ORDER BY
 case sensitivity in sort (排序中区分大小写), 42
 compared to GROUP BY clause (与GROUP BY子句比较), 116-118
 descending order (降序), 40-43
 highest/lowest values, finding (最高/最低值, 查找), 43
 utilizing (利用), 38
 orders table (orders表), 288-289
 outer joins (外部连接), 147-149

P

parameters (参数), 223-227
 parentheses (圆括号)
 grouping related operators(分组相关的操作符), 56-57
 IN, 57-59
 passwords (口令), 266, 271
 percent signs (wildcards) (百分号(通配符)), 62-63
 portability (INSERT statements) (可移植性(INSERT语句)), 180
 portable code (可移植代码), 89
 primary keys (主键)
 definition of (定义), 9-10
 tables (表), 197-198
 productnotes table (productnotes表), 290
 products table (products表), 287

Q

queries (查询), 另见subqueries

- building incrementally(增量地建立), 129
 - calculated fields (计算字段)
 - concatenating fields (拼接字段), 82-85
 - mathematical calculations (数学计算), 86-87
 - overview (概述), 81-82
 - combining (组合), 123
 - compound queries (复合查询), 153
 - creating (创建), 154-156
 - rows , eliminating/including duplicates (行, 删除/包括复制), 157-158
 - rules of (规则), 156-157
 - sorting results (排序结果), 158-159
 - definition of (定义), 121
 - formatting effectively (有效地格式化), 124
 - WHERE clauses, combining with (WHERE子句, 组合), 153
 - Query Browser (MySQL), 19
 - query expansion (full-text searches) (查询扩展 (全文本搜索)), 168-170
 - quotes (引号)
 - numeric datatypes (数值数据类型), 303
 - string datatypes (串数据类型), 301
 - utilizing in WHERE clauses(在WHERE子句中使用), 49
- R**
- range values, checking (范围值, 检查), 49-50
 - records compared to rows (记录与行比较), 9
 - referential integrity, maintaining (引用完整性, 维护), 133-134
 - REGEXP, 70, 80
 - regular expressions (正则表达式) ^, 80
 - basic character matching (基本字符匹配), 68-70
 - limitations of (限制), 162
 - matches (匹配), 参见matches (regular expressions)
 - overview (概述), 67-68
 - ranges, defining (范围, 定义), 73
 - testing (测试), 80
 - whitespace metacharacters (空白元字符), 75
 - relational tables (关系表), 131-133
 - RENAME TABLE, 205
 - REPAIR TABLE, 275
 - REPEAT statements (REPEAT语句), 237
 - repetition metacharacters (regular expressions) (重复元字符 (正则表达式)), 76-78
 - reserved words (保留字), 305
 - REVOKE statements (REVOKE语句), 268-270
 - right outer joins (右外部联结), 148-149
 - rollbacks (回退), 251-253
 - ROLLUP, 113
 - root dangers (root的危险), 264
 - rows (行)
 - complete rows, inserting(完整行, 插入), 177-181
 - definition of (定义), 9
 - duplicates, eliminating/including (复制, 删除/包含), 157-158
 - limiting retrieve results (限制检索结果), 33-34
 - multiple rows, inserting (多行, 插入), 181-183
 - retrieving (检索), 31-33
 - RTRIM() function (RTRIM()函数), 84
- S**
- savepoints (保留点), 251, 254
 - scalability (可伸缩性), 133
 - schema (模式), 7
 - scripts, executing (脚本, 执行), 20
 - searches (搜索), 63
 - SELECT (查询), 另见queries
 - AS keyword (AS关键字), 85

- columns, retrieving (列, 检索)
 - all (全部列), 31
 - individual (单个列), 27-28
 - multiple (多个列), 29-30
 - concatenating fields (拼接字段), 84
 - purpose of (用途), 27
 - sequencing (排序), 119
 - self joins (自连接), 144-146
 - semicolons (分号), 28
 - server software (服务器软件), 14-15
 - server-based results formatting (基于服务器的结果格式化), 82
 - SET PASSWORD statements (SET PASSWORD语句), 271
 - sets, matching regular expressions (集合, 匹配正则表达式), 73
 - SHOW, 23-26
 - SHOW PROCEDURE STATUS, 230
 - sign values (符号值), 47-48
 - signed datatypes (有符号的数据类型), 302
 - sorting data (排序数据)
 - by multiple columns (按多个列), 39-42
 - case sensitivity (区分大小写), 42
 - in descending order (以降序), 40-43
 - overview (概述), 37-38
 - SOUNDEX() function (SOUNDEX()函数), 91-92
 - spaces, removing (空格, 删除), 84
 - special characters (regular expressions) (特殊字符 (正则表达式)), 74-75
 - SQL, 11, 46
 - startup problems, diagnosing (启动问题, 诊断), 275
 - statement syntax (语句语法), 293
 - statements (语句), 另见individual statements
 - formatting (格式化), 195
 - overview (概述), 28-29
 - stopwords (非用词), 175
 - stored procedures (存储过程)
 - creating (创建), 220-222
 - cursors (游标), 参见cursors
 - disadvantages of (缺点), 219
 - dropping (删除), 222-223
 - executing (执行), 220
 - inspecting (检查), 230
 - intelligent stored procedures, building (智能存储过程, 建立), 227-230
 - overview (概述), 217-218
 - parameters (参数), 223-227
 - uses for (使用), 218-219
 - string datatypes (串数据类型), 300-301
 - subqueries (子查询), 另见WHERE clauses
 - as calculated fields (作为计算字段), 126-128
 - combining queries with (查询与子查询组合), 123
 - definition of (定义), 121
 - filtering by (用子查询过滤), 121-125
 - formatting effectively (有效地格式化), 124
 - order of process (处理次序), 123
 - self joins (自联结), 145-146
 - UPDATE statements (UPDATE语句), 188
 - SUM(), 105-106
 - syntax (语法)
 - joins (联结), 139
 - statements (语句), 293
- T**
- tables (表)
 - aliasing (起别名), 143-144
 - AUTO INCREMENT, 198-199
 - calculated fields (计算字段)
 - concatenating fields (拼接字段), 82-85
 - mathematical calculations (数学计算), 86-87
 - overview (概述), 81-82
 - Cartesian products (笛卡儿积), 136-138

- character sets, specifying(字符集, 说明), 259
- creating(创建), 193-195, 290-291
- customers table(customers表), 287-288
- default values, specifying(默认值, 说明), 200
- DELETE statements(DELETE语句), 190
- deleting(删除), 205
- joins(联结), 131
- multiple tables, joining(多个表, 联结), 139-141
- NULL values(NULL值), 195-197
- orderitems table(orderitems表), 289
- orders table(orders表), 288-289
- overview(概述), 6-7
- overwriting(覆盖), 195
- primary keys(主键), 197-198
- productnotes table(productnotes表), 290
- products table(products表), 287
- relational tables(关系表), 131-133
- renaming(重命名), 205
- updating(更新), 203-204
- vendors table(vendors表), 286-287
- views(视图), 参见views
- text(文本), 104-105
- text-manipulation functions(文本处理函数), 90-92
- time datatypes(时间数据类型), 303
- trailing space dangers in wildcards(通配符中尾空格的危险), 64

- V**
 - VALUES, 180
 - variables(变量), 223
 - vendors table(vendors表), 286-287
 - versions of MySQL(MySQL版本), 15
 - views(视图)
 - calculated fields(计算字段), 214-215
 - common uses for(普通使用), 208-209

complex joins, simplifying (复杂联结, 简化), 210-211
data, reformatting (数据, 重新格式化), 211-212
overview (概述), 207-208
performance issues (性能问题), 209
reusable views (可重用视图), creating (创建), 211
rules and restrictions (规则和约束), 209
unwanted data, filtering (不需要的数据, 过滤), 213
updating (更新), 215-216
utilizing (利用), 210

W

WHERE clauses (WHERE子句), 另见SELECT
checking against single values (检查单个值), 47-48
checking for nonmatches (不匹配检查), 48-49
combining (组合), 53-55
combining AND/OR (组合AND/OR), 55-57
combining queries (组合查询), 153, 另见compound queries
compared to UNION (与UNION比较), 158
dates, filtering by (日期, 过滤), 94-95
filtering groups (过滤组), 115
importance of in joins (在联结中的重要性), 135-136

IN, 57-59
NOT, 59-60
NULL values (NULL值), 50-51
operators (操作符), 46-47
overview (概述), 45-46
parentheses (圆括号), 57
quotes, utilizing (引号, 利用), 49
range values, checking (范围值, 检查), 49-50
whitespace metacharacters (空白元字符)
regular expressions (正则表达式), 75
statements (语句), 29
wildcards (通配符)
*, 31
%, 62-63
_, 64-65
guidelines for (指南), 65-66
